

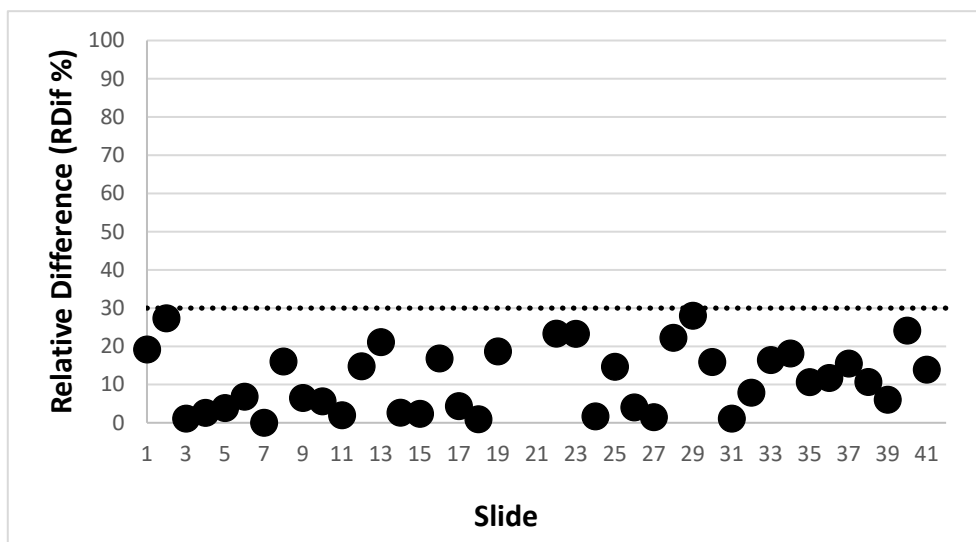

Fig. 2 Relative Difference (RDif %) between airborne pollen concentrations recorded by the technicians responsible for the site and the technicians who received the slides during the QC exercise for Poaceae pollen. Dashed line = RDif 30%, which is the amount of error considered to be reasonable for this study. (A) Total Pollen (n= 39); (B) Poaceae pollen (n= 40). Circles with light grey fill = RDif > 30% and considered to be outside the range of this study. Note that the slide with RDif 67% contained < 40 grass pollen/m³.
